

INDUSTRIAL SITE

CASE STUDY • INDUSTRIAL

Greenpoint Landscaping recently began servicing the industrial location. The site had not been serviced in many months and was in need of a cleanup. In addition to major work needed, it was important to the Client that Greenpoint adhere to the location's strict safety and environmental regulations.

Greenpoint conducted a cleanup at the location. We removed all weeds, trimmed back shrubbery and ground cover, scraped moss off the pavement, pruned trees to a safe height and eliminated encroachment from buildings. After the cleanup, the site was scheduled for recurring maintenance service in order to keep it looking upkept all year.
